## Popcorn: No Kernel Left Behind

### Materials List:

- large cooking pot
- popcorn kernels
- vegetable oil

**\*This activity should be done with the help of a trusted adult\***

### Instructions:

**1. Choose a pot large enough to hold the desired amount of popped popcorn. Popcorn has a volume expansion of over 25 times, so 1 tablespoon of kernels yields 1.5 cups of popped corn.**

**2. Coat the bottom of the pot with oil. Add two kernels to the pot, cover with a lid, and place over medium heat.**

**3. When the two kernels pop, remove them from the pot, turn off the heat and add the remaining kernels. Shake the pot so the kernels spread out evenly and let it sit for 1 minute.**

**4. Turn the heat back to medium. Leave the cover slightly ajar so steam can escape.**

**5. When it's been 10 seconds since you heard the last pop, that was the last kernel. Your popcorn is ready to eat!**
